

Project Executable Files

Date	30 June 2026
Team ID	XXXXXX
Project Name	RISING WATERS
Maximum Marks	3 Marks

Project Executable Files :

This section contains all executable and deployable files required to run the Rising Water Monitoring & Alert System. It includes the complete source code, setup guide, dependency files, configuration files, database (if applicable), API documentation, and deployment details so that the evaluator can successfully run and evaluate the project.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes

7	APK / Executable binary (if applicable for mobile/desktop apps)	Yes
8	Dockerfile / Containerization config (if applicable)	Yes

9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Rising-Waters/

```

|
|— static/
|   |— main.css
|   |— main.js
|— templates/
|   |— home.html
|   |— index.html
|   |— chance.html
|   |— no_chance.html
|— app.py
|— app_old.py
|— main.py
|— train_model.py
|— model.pkl
|— flood_dataset.xlsx
|— floods.save
|— transform.save
|— requirements.txt
|— Procfil

```

Field	Details
Hosted / Deployed URL	https://dashboard.render.com/web/srv-d92b0pernols738ta3p0/deloys/dep-d92bpkpo3t8c73bahcv0?r=2026-07-01%4007%3A07%3A03%7E2026-07-01%4007%3A10%3A38
Login Credentials (Demo)	Not required
Platform / Hosting Provider	Render (Python Flask)
Repository Link	https://github.com/satyanamala13-ship-it/RAISING_WATERS_PROJECT_AIML_TRACK_TENPLATES/tree/main
Demo Video Link	Not Available

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Prerequisites:

Python 3.10+, Flask, Pandas, Scikit-learn

Step 1: Clone the GitHub repository.

Step 2: Install dependencies using:

pip install -r requirements.txt

Step 3: Run the application:

python app.py

Step 4: Open the browser and visit:

http://127.0.0.1:5000

Step 5: Enter input values and click Predict to view the flood prediction result.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Sensor accuracy depends on calibration	Calibrate sensors before deployment
2	Internet connection required for cloud alerts	Offline logging available
3	Weather conditions may affect sensor readings	Periodic maintenance recommended
